A short, sharp, and effective essay about gender, the wrong ideas many people have about feminism, and why it is so damn important. Even today.

I suppose an "essay" doesn't sound like something most people want to rush out and read. It sounds like a chore, like hard work, like something that you should maybe read... someday... if you ever get around to it. But this doesn't feel like an essay at all. The author delivers a compelling and deeply personal account of her experiences and the experiences of her friends - male and female, young and old, Nigerian and American.

She makes many fantastic points and makes them in a conversational tone, without seeming preachy or patronizing. Looking at the way we treat women and men, and how the expectations we have of both genders is contributing to a gender divide, the author makes an argument for a better future where we are not put into gendered boxes.

I've actually written a little about this in the past, but I especially like the way she draws attention to the importance of the word itself. Many people are quick to say: "I absolutely believe men and women should be equal, but why call it feminism? Isn't that word exclusive? Why not say humanism (as many people do)?" Even I've been guilty of wondering the same in the past.

I think there are many great arguments for why it should be "feminism" and not just "humanism", "black lives matter" and not just "all lives matter", "gay pride" and not just "sexual pride", but I'll let Adichie do the talking on that issue. She summarizes it marvelously.
